

Study on the development of the next generation of engineers in Switzerland

In a study for IngCh (Engineers Shape our Future), Rütter Sococo, now part of EBP, analyzed the latest developments in the number of students who enroll in and graduate from engineering programs offered at Swiss colleges and universities. Of particular importance for our analysis were women and foreign students in engineering. Our report offers reliable information on the development of young engineers in Switzerland. It can be used by educational policymakers, business leaders, and researchers.

Our services

- Web-based and interactive presentation of the data
- Analysis of the development of young engineers at colleges and universities in Switzerland, including enrollment and graduation data, trends in engineering programs, and the proportion of women and foreign students in the engineering sciences
