

Optimized business processes in new premises

IBK, the local power, natural gas, and water company in the Swiss city of Kloten is planning to build a new office and workshop. Working on behalf of IBK, we analyzed its future business activities, drew up a plan for optimized business processes (e.g. in the area of logistics), and estimated the corresponding requirements that would need to be met by the space-allocation plan. The work ensured that the new building was optimally designed to meet IBK's future space needs.

Our services

- Analysis of IBK's future business activities and its need for space and employees
- Optimization of business processes
- Estimate of the requirements to be met by the space-allocation plan for the new facility
- Definition of the room-functionality and spatial arrangement requirements
